

RemoteScan™

Your scanning virtualization needs . . . *answered!*

REMOTESCAN™ is the accepted standard for hassle-free scanner connectivity and has been in constant use since 2003 by thousands of companies in over 120 countries. Purchase from us with the confidence that we offer the best stable and seamless solution for document scanning and image acquisition for complex network environments. When scanning is critical and server re-boots are not an option, RemoteScan™ is THE trusted solution. RemoteScan™ software has been used to scan over one billion documents in thousands of medical and financial companies worldwide.

USES FOR REMOTESCAN™ OVER TERMINAL SERVICES OR CITRIX®

Works with any RDP or ICA or VDI network environment

WHAT REMOTESCAN™ DOES

With RemoteScan™, scanners connected directly to client workstations can be accessed by any software running on Terminal Services or Citrix® servers. RemoteScan Enterprise™ for Terminal Services and Citrix® users easily scan directly from their workstations without compromising network security and without having to establish shared folders or directories. RemoteScan™ uses RDP and ICA protocols for total, secure integration with Terminal Services and Citrix® environments.

RemoteScan™ allows a single scanner or imaging device to be shared with other users over a network (IP, LAN, WAN), much in the same way as it is common to share printers.

RemoteScan™ easily installs on any PC running Windows (all versions including Windows 7). RemoteScan also installs on Thin Client appliances that are running XPe or Windows Embedded Standard. RemoteScan™, in any license configuration, has a small foot print (less than 2 meg), and is provided instantly as a self-installing download. Installation is automatic and takes less than two minutes.

RemoteScan™ is *the* accepted standard for scanner virtualization and is used by thousands of companies in over 120 countries.

REMOTESCAN™ USES

RemoteScan™ is the recommended solution for any business with distributed offices that need scanned documents to be stored on a remote server. Our software is widely used by companies in the medical, financial, freight, insurance, and hospitality industries.

RemoteScan™ works with all EMR, patient billing and medical software systems. The RemoteScan Enterprise™ for Terminal Services / Citrix® version is the solution for scanning directly into applications in a Terminal Services or Citrix® environment. Medical offices are required by HIPPA regulations to include electronic images (photocopies or scans) of insurance cards and hand-written notes with every patient's electronic record. RemoteScan™ helps meet "Meaningful Use" criteria. With RemoteScan™ software, scanned images are directly incorporated into the work-flow of any EMR or medical billing software system. With RemoteScan™, these software packages are able to fully utilize their scanning capabilities when used with Terminal Services or Citrix®.

RemoteScan™ works with all financial software systems. RemoteScan™ allows satellite offices and bank branches to utilize any scanning software with their paperless work flow solutions.

RemoteScan™ allows cost-saving results by enabling any imaging device to be networked and used with enterprise document management systems. The LAN version of RemoteScan™ allows a single scanner to meet the needs of an office in the same way that a single printer is often shared by several office workers.

INSTALLING AND USING REMOTESCAN™

RemoteScan™ software is provided as a downloadable, self-installing executable. The setup program walks users through the installation and configuration steps. Downloading, installing and configuring of RemoteScan™ takes only a few minutes, and can be done by any office worker.

RemoteScan™ is installed on each computer or thin client appliance where scanners are directly attached, as well as onto any computer which needs to access the scanners. In Terminal Services / Citrix® environments, RemoteScan™ is also installed on the Windows Terminal Services / Citrix Server or server farm.

For RemoteScan™ to function properly, it is necessary to first connect a TWAIN or WIA compatible scanner to a PC or thin client appliance, and then install the scanner driver provided by the scanner manufacturer. RemoteScan™ will then become the user interface for the installed scanner.

REMOTESCAN™ FEATURES

Support for all scanners - RemoteScan™ allows any number of scanners to be shared on a network. In a Terminal Services / Citrix environment this is advantageous since software on the server will detect individual scanners at remote locations as if they are locally attached.

TWAIN and WIA - RemoteScan™ supports all TWAIN and WIA compliant scanners and imaging devices, including high-end scanners, sheet feeder scanners, 'all-in-one' devices, card scanners, flatbed scanners, web cams, and digital cameras.

Lossless Compression - RemoteScan™ uses highly efficient, lossless compression for transmitting data, and does not appreciably slow down overall network traffic.

RDP and ICA Support - RemoteScan™ uses native RDP and ICA protocols - no need to change firewall settings.

Customizable Look and Feel - Restrict user's scanning choices. Use the RemoteScan™ interface to 'lock-down' scanner settings, even among many different brands and models of scanners. Forces scanning area, DPI resolution and color settings for consistent results.

ADDITIONAL FEATURES

- Works with all versions of Windows® since and including Windows98®.
- RemoteScan™ works with Windows® Terminal Services / Citrix®. Connect a scanner to a local computer and it can then be used by server software located on the Terminal Server computer.
- iRemoteScan – for the Apple iPad® – scan to your iPad from scanners attached to PCs or workstations.
- Works with scanners via parallel, USB, FireWire or SCSI connections.
- Allows scanners to be accessed and operated by any Windows computer on LAN/WAN, and works with any software applications that can import from any scanner (Photoshop, ScanSoft PaperPort, Acrobat, Word, etc.). Works with any custom software applications that include scanning functionality.
- Works over LAN, Wireless, WAN and Internet networks.
- Multi-lingual: currently available in English, Spanish, German, Italian, French, and Dutch.
- No noticeable increase in scanning time even over a network. RemoteScan™ will keep up with ultra-high end, ultra-high speed document scanners.
- RemoteScan™ enables scanning from XPe thin clients and works well with Neoware and Wyse thin client appliances.
- User interface is well designed and easy to use.
